Practice 2.1

- Implement a script that works with a video camera and adjusts brightness and/or contrast.
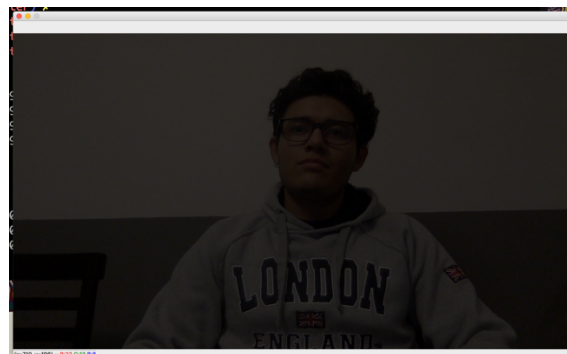

No brightness added:

Brightness added:

Brightness reduced:

- Make a script that over a video or camera, process the edge detection for (Sobel, Prewitt, and Canny) by comparing its results.

Canny edge detection

Sobel edge detection

Prewitt edge detection

- Apply stitching edge detection on a binary mask produced with the result of practice 1.3.
